POPULATION

The then white occupied areas of New Orleans are now occupied by African Americans. There is no big group of Hispanic population in the year 2021 as there was in 2015. Speculations are such that the major shift in change was because of Hurricane Katrina. Predominant white families left towns unable to find affordable housing after the disaster.

From as what we discussed so far, African american population are the dominant group in Louisiana. However, from this table, we can see that these people face the great difficulties as the poverty rate of the african american population is more than any other group. While white have a poverty rate of 13% the poverty rates of black is twice as much to 31%. This owes to the fact that African Americans earn less than any other group in Louisiana. The average median income of blacks in louisiana is \$36,078 while whites earn an average of \$69,655.

From the above figure, we can see that the opportunity index in terms of Employment, housing, transportation is more predominant in the south than in the north. Housing suffers the most in these cases. Most of the african american regions have low housing opportunity compared to other places. Also from the table we can see that the percentage of black population is more in low opportunity areas while the high opportunity places are mostly white predominant.
